CERAMENT® DELIVERY DEVICE PORTFOLIO

Delivering New Possibilities

Introducing an expanded delivery device portfolio that offers more ways to deliver CERAMENT.

With proven bone remodeling, a highly visible radio-contrast agent and exceptional flowability, CERAMENT is the ideal bone graft for percutaneous applications such as subchondral defects, bone lesions and cysts.

COMMON APPLICATIONS:

- *Bone lesions*
- *Subchondral insufficiency fractures*
- *Subchondral bone marrow edema*
- *Boney decompressions*
- *Unicameral bone cysts (UBC)*
